

## Company Profile

Refrigeration, heat recovery, ventilation, heat pumps and air-conditioning: At Pitkin & Ruddock our success for delivering complete temperature controlled solutions, service and planned maintenance, is built on 60 years of experience and ongoing excellence. Established in 1954 we have gained extensive experience in meeting the cooling, chilling, freezing and heating requirements of thousands of customers. Whatever the application, our qualified and experienced staff will advise and deploy the most appropriate solution your business needs.

### Our Services

#### Refrigeration

Experts in refrigeration, we can design and supply any cold containment solution for any sector. From bespoke modular cold rooms and completely refrigerated factories through to refrigerated cabinets for schools, hotels, restaurants, pubs and caterers, including ice machines - we have it all covered.

#### Renewables

Heat pumps are one example of key renewables, providing high levels of energy efficiencies across a wide variety of system applications. Using the 'waste' energy naturally generated, heat pumps can convert that energy to heat or cool incoming air, making your systems work for you at minimal effort.

#### Air-Conditioning

Whether you need air-conditioning for your office, lab, shop, restaurant, factory or server room, our systems offer complete climate control. This means that they can heat as well as cool delivering a clever cost effective solution that's good for you, good for the environment and a good investment.

#### Marine

Marine systems have their own sets of challenges and need to perform in harsh and unforgiving environments. Our marine specialists understand the technical and practical demands, whether industrial or domestic, and aim to ensure a comfortable life at sea.

#### System Design

From standard comfort cooling to specialist applications such as server and communication rooms, we'll listen to you and design a solution that fits your business requirements.

Ensuring that you get energy efficiency, environmental control, user comfort and maximum return on your investment is what we do best.

#### Installation

For us, your business comes first. Our installations are flexible so that any critical work can be scheduled around your business operations to help minimise disruption during your normal working hours.

We have years of experience but continually invest in our specialist engineers training to ensure only the very best standards of installation.

#### Service & Maintenance

We're here to support your systems beyond their initial installation. To prolong the life of your equipment and keep on-going running costs down, our friendly and supportive aftercare team will schedule preventative maintenance and regular servicing. If you need us in a hurry, not a problem, our quick response team will be there for your business critical systems.

#### Energy Efficiency & Regulation

Here at Pitkin & Ruddock we pride ourselves on exceeding the requirements set out by the Government and Trade Organisation relating to our industry sector.

We are fully F-Gas regulation compliant and can offer advice on how customers can fulfil their duties under the regulation. We employ a number of BESCA 'competent persons' who can self certify new installations that comply with the building regulations. This turnkey approach allows our customers to concentrate on their core business activities.

### Our People

Everything we do at Pitkin & Ruddock Ltd starts with people; our success is built on long term working relationships with our customers, employees and suppliers. We are a large, local, family company that pride ourselves in delivering excellence through service.

Most of our staff are long-term employees that started with a Pitkin & Ruddock apprenticeship and are now a fundamental part of our family. We continually invest in their development so our business will grow - to ensure that we continue to meet the challenges of an ever-changing world of technical and environmental issues.

As a team we strive to ensure that our customers, suppliers and our level of service delivery, from initial consultation to final installation is constant and completed to the highest standard. Our people's expertise, dedication and commitment to our values makes us feel proud.
